## SMART Air curtain

New standard decorative generation

- Self-supporting steel rounded casing with rounded edgeless plastic side covers

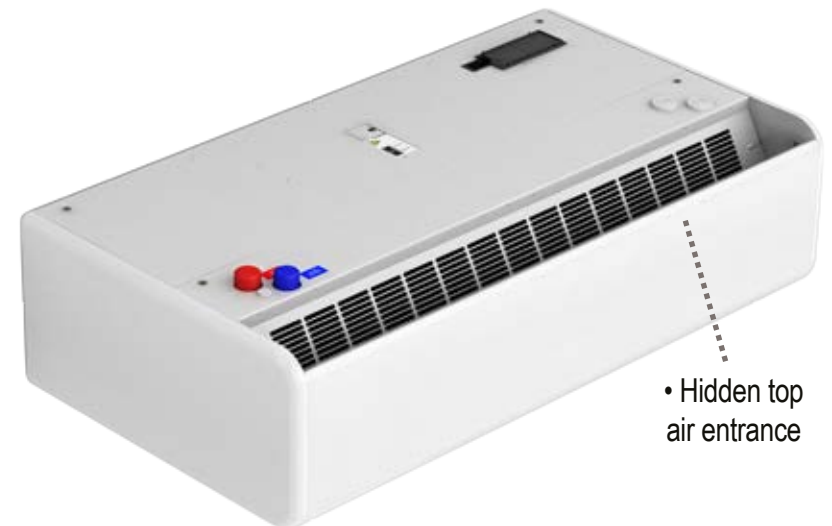

- Smooth or customizable front panel with logotypes, lighting or signage

Combining the properties of steel and rounded shapes of its injected plastic side covers, the SMART air curtain presents a high quality design and finishes, and emerges as a perfect model straddling the standard and decorative ranges.

Thanks to its top inlet, the rounded front panel provides a clean and modern vision of the air curtain, hiding its inlet grille which acts as a filter. Thus, its front panel is available for any customization required by the customer: Logotypes, signage, etc.

In addition, the curtain incorporates a double security opening system for its service door and front panel for convenient maintenance and service.

- Hidden top air entrance

# Air Curtains Range

**Heat Pump Air Curtains**

# Heat Pump DX Air Curtains

Heat pump is a device that uses a small amount of energy to move heat from one location to another. This system is extremely efficient because it simply transfers heat, rather than burn fuel to create it. It consists on a closed circuit through which a special fluid (refrigerant) flows. This fluid turns into a liquid or gaseous state according to temperature and pressure conditions. The circuit is composed by: compressor, condenser, expansion valve and evaporator.
